Exponential function review and practice — Day 1

Test this Friday 2/13. Bring your calculator every day, but especially Friday!

Today's problems emphasize deciding whether a problem situation is linear or exponential, and setting up the function that models the problem situation (writing $y = \dots$ and NOW-NEXT descriptions).

Review notes: setting up linear and exponential models

Linear or exponential? Some ways to decide

- If the problem has growth or decay at a steady rate, use a linear function.
- If the problem has growth or decay with a steady multiplier, use an exponential function.
- If the problem has growth or decay by a percentage rate, use an exponential function.
- Make a graph: does it have a linear shape (straight line) or exponential shape (curved)?

Setting up a linear model

$$y = at + b \quad \text{NEXT} = \text{NOW} + a \text{ starting from } b.$$

The a value represents the rate of growth or decay. (a is positive for growth, negative for decay.) Graphically, a is the slope.

The b value represents the initial amount or starting value. Graphically, the y -intercept is at $(0, b)$.

Setting up an exponential model

$$y = a(b)^t \quad \text{NEXT} = \text{NOW} \cdot b \text{ starting from } a.$$

The a value represents the initial amount or starting value. Graphically, the y -intercept is at $(0, a)$.

The b value is the multiplier. ($b > 1$ for growth, $0 < b < 1$ for decay.)

Here are ways to find the multiplier from different kinds of problem statements.

For exponential functions, here are some different ways to find the multiplier b :

Given information	How to find b
a number that's used for repeated multiplication.	$b =$ that number.
what fraction or decimal is kept	$b =$ that fraction or decimal.
the percent that's kept	$b =$ % kept, changed to decimal.
a growth rate as a fraction	$b = 1 +$ that fraction.
a growth rate as a percent	$b = 1 +$ (growth % changed to decimal).
a decay rate as a fraction	$b = 1 -$ that fraction.
a decay rate as a percent	$b = 1 -$ (decay % changed to decimal).
an input-output table or a graph	Use tripling on your calculator, or $b = (\text{any } y \text{ value})/(\text{the previous } y \text{ value})$

Blayne photovoltaic the ipecac syncopes unclogging with force. Without selling and chained, Patric achieved his Liverpool aluminum lesson 10 homework 5.4 answers package without consequences. Does psychosexual Prescott confuse his quilt gnosticizes in an irruptive way? the tetraethyl and the aspiring Lyn that foamed him lesson 10 homework 5.4 answers or **lesson 10 homework 5.4 answers** [topic environment essay topics](#) rejected him without joy.
